

Smart Content Delivery

Smart Content Delivery offers optimal content distribution environment

Customer's Merits

Improves response time dramatically by directing end users' requests to the nearest cache server located on NTT Communications Global IP Network.

Enhances website download experience by reducing content delivery load on origin server. This allows the origin server to focus more capacity on back end transaction processing.

Provides effective geographic expansion without having to deploy and manage your own facilities abroad.

Streaming Service

SCD supports three major streaming protocols: Windows Media®, RealMedia™ and QuickTime® meeting various needs from on-demand to live streaming.

Secure Content Distribution

SSL (Secure Socket Layer) capability is enabled using accelerators distributed on our network. This improves delivery and reduces load on the origin server, while providing content distribution with the highest security, for use on services such as e-Commerce.

SCD Portal

Through our Customer Portal, SCD provides a wide range of online services, such as traffic monitoring and content management.

* Windows Media is either a registered trademark or trademark of Microsoft Corporation in the United States and/or other countries. * RealMedia is a trademark or a registered trademark of RealNetworks, Inc. * QuickTime is a trademark of Apple Computer, Inc., registered in the U.S. and other countries.
